

VDC Electronics, Inc. has unveiled its new line of Concorde-Compatible BatteryMINDER® 12-V and 24-Volt battery charger/maintainers/conditioners. Known as the CEC1 series (certified to California Environment Commission Standard), models 128CEC1-AA-S2, 128CEC1-AA-S5, 244CEC1-AA-S2 and 244CEC1-AA-S5 feature advancements in easy to understand battery analysis and condition not previously available in any other single model and have been approved and recommended by the Concorde Battery Corporation exclusively for their sealed valve-regulated AGM (Absorbed Glass Mat) Aviation batteries.

Following Concorde's prescribed guidelines, VDC Electronics raised the maintenance - float voltage to ensure a more fully charged battery over the full range of temperature (>14°F to 130°F) by providing each of these BatteryMINDER units with an "Ambient-Battery" temperature compensating sensor. Without this type of temperature sensing, batteries will be under-charged in colder temperatures (<70°F to 14°F) and over-charged in high temperatures (>80°F to 130°F).

Users can now determine the level of charge remaining in their battery, and if weak and in need of replacement, before going bad. In addition, units test for weak cells and will recover weak or severely discharged batteries that other chargers would reject. Their high efficiency design, controlled by industrially-rated microprocessors, allow continuous operation (24 hrs./day) for less than \$0.43/month*.

All models include full-time pulsed desulfation circuitry designed to safely dissolve sulfation build-up on the battery's storage plates, restoring lost cranking power and extending life. Our desulfation method is fully automatic, does not use potentially damaging high voltage and is exclusively protected by two U.S. patents.

*based on continually maintaining one 125Ah battery

For those who require permanent installation of a connector that easily attaches and detaches an Aviation-Calibrated BatteryMINDER to their aircraft's battery(s) when installed in an FAA-certified aircraft, consider purchasing an Airframe Interface Kit (Model BM-AIK2, not shown) directly from audioauthority.com/product_details/BM-AIK2

Sold and Serviced by:

From the Makers of BatteryMINDER® ...

...the heart of your system®

-Compatible Aviation Maintenance - Battery Chargers - Desulfators

Introducing
12 Volt and 24 Volt
Energy Efficient
Aviation-Calibrated
-S2 and -S5 models for
CONCORDE Batteries.
